# iErgo brings Ergonomic Touch and Viewing in your workplace

## Efgo Series

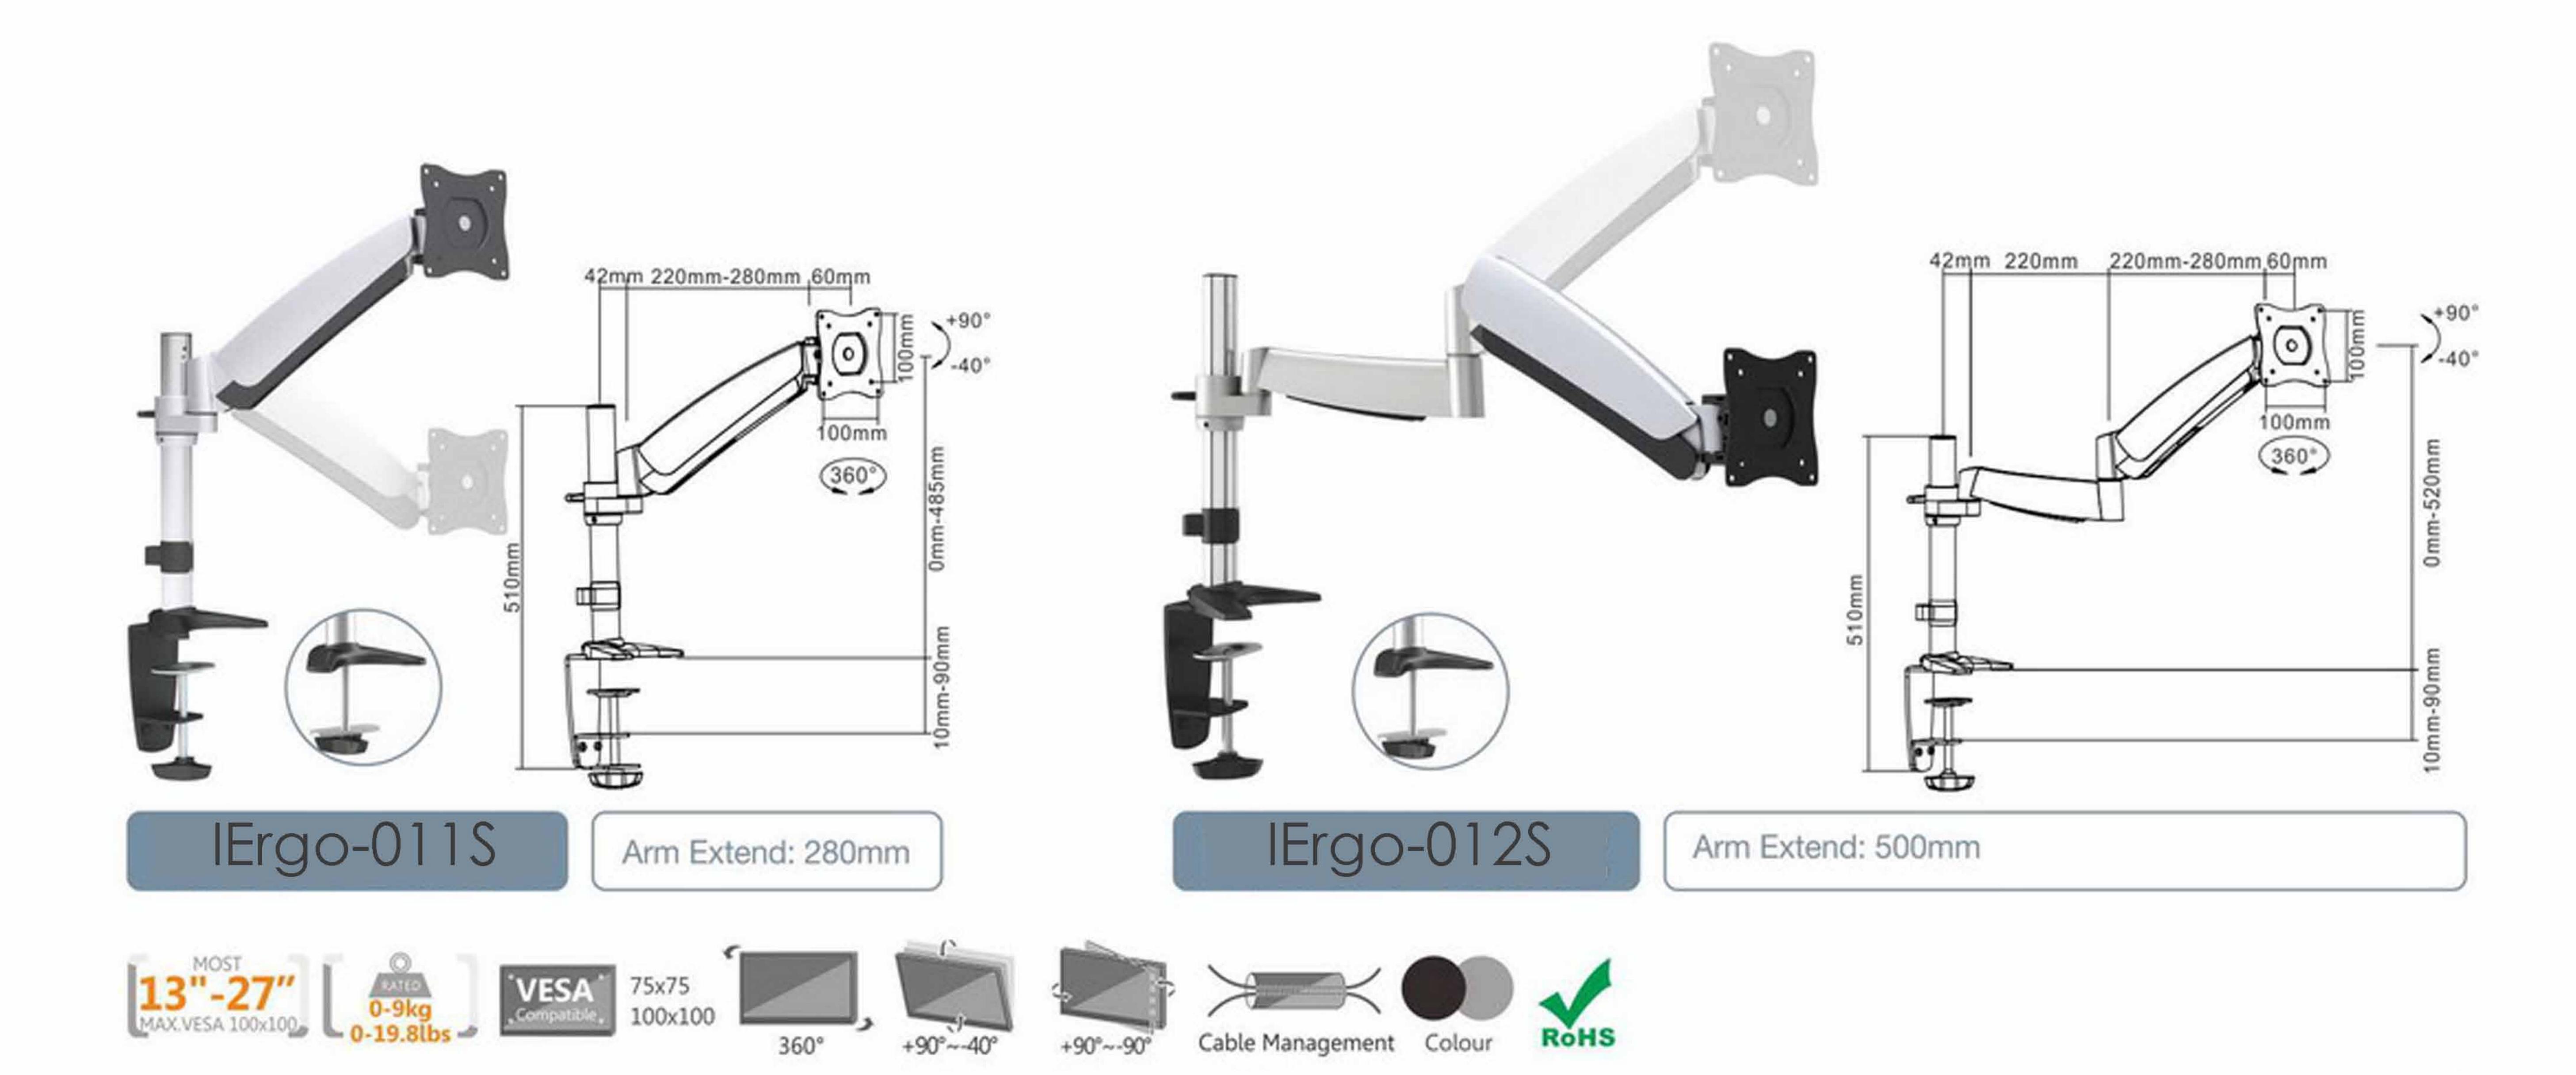

The Innovate iErgo Monitor Arm is a lightweight, easily adjustable monitor arm, which makes adjusting the depth, height or angle of your monitor a breeze. The pneumatic mechanism counter-balances the weight of your monitor, so it stays suspended in your chosen position until you decide to adjust it.

Adjustments are easily made with one fingertip; no loosening or tightening is required. Whether you have a height adjustable desk or not, an articulating monitor arm like the Innovative iErgo Monitor Arm will help you tweak your monitor's position until it's just right. You can even switch from landscape to portrait mode quickly with the rotating mount, and the slick silver finish is an attractive addition to any workspace.

### Touch balance anywhere!
